SUMMARY

Microsoft DP-900 certified Data & Reporting Analyst with 2+ years of experience in building real time dashboards, predictive models and business storytelling to help organisations across **Education and IoT** sectors stay ahead of competition and make informed decisions faster. Proven track record of building scalable data pipelines and forecasting solutions. I bring my analytical and deep dive abilities for providing nuanced data-driven insights and recommendations to the business. My most notable achievement at **Builders Academy Australia** was overhauling the data reporting infrastructure to connect multiple isolated data sources and automated student enrolment dashboards eliminating human error and saving manual reporting time of **~900 hours per year**.

WORK EXPERIENCE

Data & Systems Analyst | Farmo Australia

July 2024 – November 2025

Farmo is an Australian agri-tech company that builds IoT devices for monitoring water and environmental conditions on farms.

- Created a predictive model to estimate battery life from usage data using Python, allowing farmers to replace batteries before failure and cut unexpected outages by **30%**.
- Using comparison analysis and historical trends, I discovered that the repeated downtime was linked to faulty firmware updates. A swift firmware update reduced water management device failure rates by **22%**.
- Developed a brand new dashboard view using Excel and Power BI to track device uptime, data transmission rates, and faults, allowing the leadership team to expedite decision-making in hours vs days.
- Migrated raw device sensor data from legacy on-prem SQL Server to Lakehouse to lower operational costs, achieve **~100%** uptime and disaster recovery mechanisms.

Data Analyst | Builders Academy Australia

February 2024 - June 2024

BAA is a Registered Training Organisation providing trade and construction qualifications across Australia.

- Helped reduce delays by **40%** in the student onboarding experience by automating daily and weekly onboarding Power BI dashboards.
- Identified and flagged historical student enrolment trends to help the team prepare capacity, scheduling and resource planning by extracting data using SQL from ERP systems, cleaning and analysing over **10,000 student records** and automating the process using Excel VBA and Macros.
- Delivered commercial insights on course demand to assist management in vendor allocation strategies and marketing focus.
- Created onboarding documentation, trained and mentored junior interns, and ramped them up on Excel and data cleaning methods quickly to get the team operating at full capacity within **3-4 weeks**.

Data Scientist | Commonwealth Bank

May 2025 - July 2025

CBA is one of Australia's largest financial institutions, serving retail and business customers.

- Built data pipelines integrating retail banking and transaction datasets into Power BI dashboards that tracked KPIs like transaction volumes and churn, accelerating quarterly reviews by **25%**.
- Applied GDPR, HIPAA and APRA-compliant anonymisation and validation, ensuring data security and report accuracy for cross-team analysis.
- Analysed app and NPS data with NLP to forecast demand for credit and digital banking products, boosting forecast accuracy by **15%** and cutting service turnaround time by **25%**.
- Optimised database schemas for faster Power BI and SAP queries, reducing report wait times by **30%**.

PROJECTS

- **NSW Councils Financial Performance Analysis** – Developed a Power BI financial analysis dashboard across six NSW councils, uncovering critical budget variances, including a \$20M surplus-to-deficit swing and a 3,162% YoY operating result increase and highlighting exceptions, risks and decision-ready insights.
- **Forest Fire Damage Prediction (R)** – Built predictive models using ANN & KNN in R, improving forest fire forecast accuracy by 20%; visualised risk areas with ggplot2.
- **Electric Vehicle Market Analysis (Tableau + SQL)** – Created dashboards of sales trends (2019–2023), influencing product positioning and pricing strategies through gap analysis. Recommended Solutions for Safety stock and Overstock.
- **Inventory Analytics Dashboard (Tableau)** – Designed stock performance dashboards after doing a thorough data cleaning and data wrangling process; recommended JIT strategies that reduced overstock costs.

SKILLS

- **Data & Business Analytics:** Power BI (Power Query, DAX), Excel (VLOOKUP, Pivot Tables), Macros, VBA, Tableau, SQL (PostgreSQL, MySQL, SQL Server, SQL Alchemy, T-SQL), Python (Pandas, NumPy, Matplotlib), R
- **Reporting & Systems:** SAP, VETtrak, Salesforce, Jira, Confluence, Monday, Workday
- **Cloud & Data Management:** AWS (Lambda, RDS, S3), Azure, Microsoft Fabric, Snowflake, Datalake Gen 2, OneLake, Fabric Notebooks
- **Systems & Tools –** Jira, Confluence, PMO tools, Records management systems, Microsoft Office (agenda packs, minutes, reporting), SharePoint.
- **Soft Skills:** Stakeholder communication, problem solving, process improvement, cross-functional collaboration, agile project delivery, requirements gathering, root cause analysis, data Governance & Compliance, executive reporting, Hypothesis and A/B testing.

EDUCATION & QUALIFICATIONS

Bachelor of Computer Science (Data Science)

Swinburne University of Technology
