SUMMARY

Detail-oriented recent graduate with a strong foundation in data analysis and statistics, eager to leverage analytical skills and problem-solving abilities to drive data-driven decision-making in a dynamic environment. Proven ability to extract insights from datasets and assist in strategic decision-making.

EDUCATION & CERTIFICATIONS

- **Bachelor of Computer Science (Data Science), Swinburne University of Technology, 2024**
- Advanced Python: Working With Data, 2024
- Advanced Python: Working With Databases, 2024
- Business Analysis Foundations, 2024
- Excel Essential Training (Microsoft 365), 2023
- The Non-technical Skills of Effective Data Scientists, 2023
- DP900 Azure Data Fundamentals
- IT Professional Year, Australian Computer Society, Currently Pursuing

SKILLS

- **Data Analysis & Visualisation:** SQL, SQL Alchemy, NoSQL, Tableau, Power BI, Excel, KNIME, D3.js, R, Python (Pandas, NumPy, Matplotlib)
- **Systems & Tools:** VETtrak, CRMs, Jira & Confluence, Monday, Salesforce
- **Cloud & DevOps:** AWS (lambda, RDS, DynamoDB, S3), Azure (DevOps, Pipelines, CosmosDB)
- **Database & Big Data:** Office365, Hadoop, Hive, Pig, Scoop
- Agile & Scrum Methodologies
- Creative & Critical Thinking
- Analytical and problem-solving abilities
- Requirement Gathering & Documentation
- Stakeholder Communication & Engagement

CORE CAREER HISTORY

Data & Systems Analyst | Farmo, Australia | July 2024 - Present

Accountabilities

- Develop automated and ad-hoc reporting solutions using a combination of software; Tableau, Power BI and SQL.
- Extract, cleanse, transform, and prepare comprehensive datasets for use in analysis, reporting outputs, and systems management.
- Utilising data from Enterprise Data Warehouse to build custom reports and dashboards utilising Power BI and/or Tableau.
- Creating Data visualisation and storytelling to improve campaign performance.
- Develop new (or amend existing) analytics, dashboards, reports and queries.
- Support management of complex database systems and applications used to store and analyse the data.
- Develop and maintain current and new data visualisation dashboards and interfaces.
- Data analysis and reporting to identify areas of opportunity and assist executives in their decision-making.
- Developing a data forecasting model with python after analysing trends and patterns.
- Developed daily Excel and Power BI dashboards to monitor device health, average data transmission, and downtime, improving real-time operational visibility for stakeholders.
- Extracted and transformed raw sensor data from AWS and legacy SQL Server, enabling seamless migration and cleaner data pipelines for analysis and reporting.
- Delivered insights into recurring device downtime issues, helping the engineering team re-engineer components and reduce failure rates by 22%.
- Completed a predictive analytics project on battery life estimation by analysing historical device usage patterns, enabling customers to proactively replace batteries, improving satisfaction and reducing unexpected outages.

ICT Data Analyst | Builders Academy, Australia | February 2024 - June 2024

Accountabilities

- Extracted, cleaned, and analysed 10,000+ student records using Excel, VETtrak, and SQL, identifying enrolment trends, optimising resource allocation.
- Developed automated dashboards (daily/weekly) for students enrolled in different courses, reducing student onboarding time by 15% from the previous manual process.
- Delivered data-driven insights to management, influencing student intake planning and course offering strategies.
- Mentored new interns on data wrangling and reporting, fostering a collaborative, data-focused environment.

ADDITIONAL CAREER HISTORY

Introduction to Data Science Job Simulation | Commonwealth Bank | May 2025 – May 2025

Accountabilities

- Completed a job simulation involving Data Management skills for Commonwealth Bank's Data Science team.
- Demonstrated proficiency in creating data engineering pipelines to aggregate and extract valuable insights from datasets, optimising data-driven decision-making.
- Acquired skills in anonymising personal data within datasets, ensuring compliance with data privacy regulations.
- Proposed effective data analysis approaches, particularly related to social media, and demonstrated the ability to design well-structured databases for efficient information management.

KEY PROJECTS

Forest Fire Damage Prediction Model

Responsibilities

- Developed a predictive model in R to forecast forest fire spread using 5 years of weather data (temperature, wind speed, humidity, and rainfall).
- Applied Artificial Neural Networks (ANN) and K-Nearest Neighbours (KNN) algorithms, achieving a 20% improvement in prediction accuracy over baseline models (Random Forest, Decision Tree).
- Created intuitive data visualisations with ggplot2 to map fire-prone regions, helping government agencies optimise disaster prevention and resource planning.

Electric Mobility Business Analysis with Tableau

Responsibilities

- Conducted in-depth market analysis of the electric vehicle (EV) sector from 2019 to 2023 for SparkEV, uncovering key sales trends and identifying top-performing models across regions.
- Designed and developed interactive Tableau dashboards, integrating SQL-based queries to process and visualise large-scale datasets.
- Delivered strategic insights that directly influenced product lineup enhancements and pricing strategies, contributing to a more competitive market position and improved sales performance.

NSW Councils Financial Performance Analysis

Responsibilities

- Analysed audited financial statements for 6 NSW councils to assess budget vs actual variance and YoY performance across income, expenses, capital grants, and operating results.
- Built Power BI dashboards using Power Query and DAX to track high-variance areas, operating deficits/surpluses, and capital dependency risks.
- Identified major financial drivers, including \$62M operational overspend, \$26M unplanned income uplift, and \$64M capital grant turnaround, translating insights into actionable cost-control and asset-management recommendations.
- Delivered executive-level insights on liquidity risk, recurring revenue sustainability, and expenditure governance, supporting data-driven financial decision-making.

Data Analysis with Tableau

Responsibilities

- Designed a comprehensive dashboard in Tableau to analyse inventory KPIs like turnover rates, safety stock levels, and stockout risks.
- Identified excess inventory in mountain bikes, recommended Just-In-Time (JIT) inventory systems, reducing overstock-related costs.
- Provided data-backed recommendations on improving demand forecasting and real-time tracking using predictive analytics and visual storytelling.
