Dear Dr Meath,

I am writing to apply for the Data and Systems Specialist role at Melbourne Girls Grammar, as advertised on your website. I previously worked as a Data & Systems Analyst and Data Analyst, bringing over two years of experience in managing, analysing, and reporting on complex data systems. I hold a Bachelor of Computer Science (Data Science) from Swinburne University of Technology and have hands-on experience supporting integrated systems in education and technology environments.

In my previous roles, I extensively used SQL, Power BI, Excel, and Crystal Reports to maintain data integrity, automate reporting, and provide actionable insights. At Builders Academy Australia, I overhauled the student enrolment reporting infrastructure, integrating multiple data sources and automating dashboards, which eliminated manual errors and saved approximately 900 hours of reporting time per year. I also provided training and guidance to staff on system processes, enabling smoother operations and improved data accuracy.

I enjoy working closely with stakeholders to understand their needs, translate complex data into clear insights, and implement system improvements. MGGS's commitment to empowering students through excellence and innovation resonates with me, and I am particularly motivated by the opportunity to support your Student Management System and connected applications to enhance operational efficiency and data-driven decision-making.

I am excited about the prospect of contributing to your team, supporting accurate and reliable data systems, and continuing to grow professionally within a values-driven school environment. Thank you for considering my application.

Kind regards,
Bhuvan Virmani
